

International Journal of Human Sciences Research

TECHNOLOGICAL SECRETS OF THE BRAZILIAN ARMED FORCES

Werner Rayden

It is important to highlight the need to separate the account of this book from the person of the author. Only in the future, perhaps very distant, will it be possible to attest to the veracity of what is contained in this brief report. By the way, this brief report is an attempt to register his conclusions about a hardware and software know-how, strangely in the hands of the Brazilian Armed Forces. As for the author, he has been monitored since approximately 1988, with all the State's technical apparatus, and this report is not the scope for clarification on this. It must be noted that he served six years in the Brazilian Air Force.

*"If I've seen further, it's by standing
on the shoulders of giants."*

Isaac Newton

ABOUT THE BOOK

This succinct report in number of pages, but whose content goes beyond what is known, intends to be direct and objective. Theological or moral issues will not be addressed, which will arise sooner or later, to anyone who reflects on the content exposed in this book. The author is aware that, perhaps, only for posterity, the true importance of the notes recorded in this work will be revealed.

In advance, clarify and inform the reader that the present book is far from exhausting the main subject, whether due to the scarcity and imprecision of the sources for consultation, or due to the nature of the thing treated.

It was a herculean task to identify these few people cited by abbreviations, in addition to the personal risk created by making public what, until now, is considered the best kept and most important state secret in the lifeline of the Republic of Brazil. Even more difficult was to determine the start date for the installation and operation of this technological know-how in the Brazilian Army. It was much more difficult than all the other research put together, sifting through an endless volume of records and facts that resulted in a line of evidence and guidance on what to look for, and what to research. Despite all this method and effort, it is concluded that, after 26 years, the research is incomplete.

It is negligible to make public that for the present research, numerous articles of the national security law in force at that time were violated, so it is imperative not to reveal all sources or methods.

Finally, I take advantage of this writing, and make a direct criticism: it was a constant, from beginning to end, the greed for titles of the generalship of the Brazilian Armed Forces.

CHATGPT

According to the various notes made during the text of this report, this book is the result of 26 studies prior to the advent of the tool called chatgpt. Therefore, there was no query on this Artificial Intelligence for the preparation of this report.

ORIGIN AND INSTALLATION

Based on the examination of all available research material, before and after the availability of the internet in Brazil, for more than two decades, in addition to the information gathering activities carried out by the author during 6 years in a Brazilian Air Force Headquarters, the following was revealed: it was verified that the technological know-how in question had its introduction in the Brazilian Army, through the body called the National Information Service in the late 1970s, having as mentors the then Generals G. C. S. and N. C. General J. B. F., who at the time was director of the SNI, assigned himself the task of ending the military administration in Brazil, assuming the position of President of the Republic. In that time interval, there was an intense exchange between Generals in charge of strategic sectors. Such exonerations were addressed by some civil historians who are dedicated to the area of Brazilian military history, but none of them, so far, managed to clarify the reasons for the large size of the relocation of a considerable number of general officers, this circumstance is easily consulted on the internet today. This process lasted for 6 years, in the final phase of the military regime in Brazil, and another 5 years of a subsequent

civilian mandate, presided over by Mr. J. S.

It is worth highlighting the tireless research efforts and syllogisms with all the physical material available, and later the digital ones, however, after 26 years, it was not possible to identify the origin of the hardware and software that will be treated later.

The readers of this work are apologized for the brevity of the chapters, but they contain everything that was possible to extract concretely from the research material available, and from the records made by the author.

"... Oh Lord protect my words..."

Spy vs Spy

QUICK FACT

Soldiers of the Brazilian Air Force executed president-elect Tancredo Neves with a shot in the heart, who had his death officially declared on April 21, 1985.

In 1954, other soldiers, also from the Brazilian Air Force, executed President Getúlio Vargas, also with a bullet through the heart.

It so happens that the date of April 21 is one day away from the celebration of the Brazilian Air Force Fighter Aviation Day; and the 24th of August is the day before the celebration of the Day of the soldier, so we have two deaths of presidents that affect the celebrations of the Brazilian military. Of two, one: either the shot in the heart is the trademark of the Brazilian Air Force, or these soldiers suffer from a tremendous lack of creativity.

EXTRAORDINARY

It is of the utmost importance to highlight again that the findings below are based on 26 years of examination of physical documents, and later through those available on the world wide web. Add to that, the 6 years of service in a Brazilian Air Force headquarters, where the author used shady and sometimes even immoral means in order to obtain more and more concrete elements, and even so, it is believed that there is an immense volume of unknown data.

The evidence of all the material examined on the activities of the Regional Air Force Command and the high command in Brasília, led to the conclusion that the technological know-how, strangely available to the military high command, has the capacity for metaphysical measurements or, in other words, has the property of scanning the human body and, moreover, and mainly, transforming the consciousness of the brain system into external language, accessible to third parties, in short: it reads thoughts. And it is worth remembering that the aforementioned technological know-how began its activity in Brazil at the end of the 1970s, therefore, in 2023 it will be 43 years more sophisticated.

Due to the almost insurmountable research difficulties already mentioned, it was not possible to determine the quantity or location of this equipment, strangely available in Brazil. Accidentally, when looking for such information, it was revealed that a very specific sector of the Federal Police Department also operates the aforementioned technological know-how. This line of investigation ended up demonstrating that some civil servants who met the requirements for retirement were recruited to form the human part of this complex. All this during the 1980s.

As for the scope of this kind of measurement of consciousness - what do you think? The distance found is so long that it was not

possible to determine.

SECONDARY KNOW-HOW

After informing the astonishing and extraordinary nature of the technology, strangely available to the generalship of the Brazilian Armed Forces, it is worth briefly highlighting what, due to the previous findings, is considered secondary.

The entire Brazilian national territory is monitored and recorded in real time with audio and video with X-ray property 24 hours a day. The purpose of this monitoring is unknown, but, guided by the bias of the Brazilian Armed Forces, and the nature of the Federal Police Department, it can be said that the purposes are nefarious. For this purpose, it requires storage and processing capacity in hardware and software unknown even to the largest global companies in this area of activity, therefore, the type of wave used is also unknown. It is not known exactly how this monitoring is made available to auxiliary forces and state judicial police in Brazil.

REGARDING INTERNET

It is concrete and known that all computers and the like, notably the most recent ones, are subject to all kinds of interference, even and especially when they are turned off and, again, with an unknown type of wave.

"[...] one can gauge the baseness of the person by the baseness of the thing."

Montesquieu

MOBILE PHONE (ALSO A TYPE OF COMPUTER)

Everything that has been exposed for hardware and software applies even more to cell phones, which also provide audio and video even when they are turned off.

Again, appallingly, it is known that a certain system has the ability to simulate the voice of any user, with the expertise of the Brazilian police being unable to identify or differentiate an authentic call from an artificial one, or they do not insist on doing so, the curious circumstance is that the operation of this system is taken for granted by a very specific sector of the state police in Brazil.

FIXED TELEPHONY

During the 1990s, the fixed telephony network in Brazil was computerized, and today, each fixed device in homes has become an open microphone.

CURIOSITY

It is public knowledge that the Brazilian Air Force has acquired military combat aircraft called the F-39 Gripen fighter, among the innumerable functions of the technology embedded in this model of plane, is the ability to engage in dialogue and locate cell phones and make them targets in their weapons systems.

CLARIFICATION ABOUT THE BIBLIOGRAPHY

The reference bibliography for this brief account is mentioned generically, First: because the findings are incomplete; second: Because the author hopes that with the present report, some reader will be able to see further and better, and all together, we will reach more clarification. It must be noted that the volume of information is too high, so that this book constitutes a kind of line for the reader to guide himself in the maze of spurious official information available. For example, some files on the National Archives website have conflicting versions with those on the Military Commands websites about the same facts.

For any reader who is willing to research, it is important to highlight the following: the lines are naturally in chronological order and, the evidence does not deceive, it sometimes happens that the interpretation of them is wrong.

“What is past is prologue”

William Shakespeare
